NOTES

A Use optional JXFLUSH1 kit to flush-mount the cooktop into the countertop. Read all installation instructions supplied with cooktop and kit before beginning installation.

B To avoid hot cookware from contacting the countertop surface, the cooktop should be installed at least 1/32” higher than the countertop.

C Use strips of wood or solid-surface countertop material to reinforce the countertop below the flush-mount rabbet. For an island or peninsular installation secure strips to all four sides, otherwise just secure strips to the front and back under the cutout.

D Note this cooktop is only approved for installation above specific wall ovens as labeled on this unit.

E When installing this cooktop above a single wall oven, do not install the baffle.

F When this cooktop is installed above a flush-mounted wall oven, the clearance from the front edge of the countertop to the front edge of the cooktop cutout is minimum 2-1/2” plus the wall oven cleat setback.

G The cooktop platform must be a minimum height of 4 3/4” from the floor to ensure that the handle does not hit the floor when the door is opened.

H Warming drawers are approved for installation below only certain specified cooktop models. See the label attached to the top of the warming drawer or underside of the cooktop for approved combinations.

I When installing the cooktop above a warming drawer, a solid barrier must be installed at least 5-1/2” from the top of the countertop. Use any solid material such as 1/4” thick plywood. Allow at least 1/4” air gap between the barrier and the top of the warming drawer.
