HTX24EASKWS
Hotpoint® 6.2 cu. ft. capacity aluminized alloy electric dryer

DRYER DIMENSIONS (IN INCHES)

EXHAUST OPTIONS: 4-way via rear, right, left and bottom.

CIRCUIT REQUIREMENTS: An individual, properly-grounded branch circuit, protected by a 30-amp circuit breaker or a time-delay fuse, is required.

ELECTRIC DRYER RATING: 240V, 5600W, 60Hz, 24 Amp, 208V, 4400W, 60Hz, 22 Amp

INSTALLATION INFORMATION: For complete information, see installation instructions packed with product for current dimensional data.

SPECIAL INSTALLATION REQUIREMENTS Alcove or Closet Installation:
- If your dryer is approved for installation in an alcove or closet, it will be stated on a label on the dryer back.
- The dryer MUST be exhausted to the outside.
- Minimum clearances between dryer cabinet and adjacent walls or other surfaces are: 0" either side, 1" front, top and rear.
- Closet doors must be louvered or otherwise ventilated and must contain a minimum of 60 sq. in. of open area equally distributed. If this closet contains both a washer and a dryer, doors must contain a minimum of 120 sq. in. of open area equally distributed.
- No other fuel-burning appliance shall be installed in the same closet with a gas dryer.

BATHROOM OR BEDROOM INSTALLATION:
- The dryer MUST be exhausted to the outdoors.
- The installation must conform with the local codes, or in the absence of local codes, with the National Electric Code and National Fuel Gas Code, ANSI Z223 for gas dryers.

MINIMUM CLEARANCES OTHER THAN ALCOVE OR CLOSET INSTALLATION: Minimum clearances to combustible surfaces: 0" both sides, 1" rear

For answers to your Monogram, GE Café™ Series, GE Profile™ Series or GE Appliances product questions, visit our website at geappliances.com or call GE Answer Center® Service, 800.626.2000.
HTX24EASKWS
Hotpoint® 6.2 cu. ft. capacity aluminized alloy electric dryer

For complete information, see installation instructions packed with your dryer.

DUCTING MATERIALS:
For best performance, this dryer should be vented with 4" diameter all rigid metal exhaust duct. If rigid metal duct cannot be used, then UL-listed flexible metal (semi-rigid) ducting can be used (Kit WX08X10077). In special installations, it may be necessary to connect the dryer to the house vent using a flexible metal (foil-type) duct. A UL-listed flexible metal (foil-type) duct may be used ONLY in installations where rigid metal or flexible metal (semi-rigid) ducting cannot be used AND where a 4” diameter can be maintained throughout the entire length of the transition duct. Please see installation instruction packed with your dryer for complete instructions when using flexible metal (foil type) ducting.

EXHAUST LENGTH CALCULATION:
1. Determine the number of 90° turns needed for your installation. If you exhaust to the side or bottom of dryer, add one turn.
2. The maximum length of 4' rigid (aluminum or galvanized) duct which can be tolerated is shown in the table.

A turn of 45° or less may be ignored. Two 45° turns within the duct length should be treated as a 90° elbow. A turn over 45° should be treated as a 90° elbow.

Dryers must be exhausted to the outside.

CAUTION: For personal safety do not terminate exhaust into a chimney, under any enclosed house floor (crawl space), or into an attic, since the accumulated lint could create a fire hazard or moisture could cause damage. Never terminate the exhaust into a common duct or plenum with a kitchen exhaust, since the combination of lint and grease could create a fire hazard. Exhaust ducts should be terminated in a dampered wall cap to prevent back drafts, bird nesting, etc. The wall cap must also be located at least 12" above the ground or any other obstruction with the opening pointed down.

For every extra 90° elbow, reduce the allowable vent system length by 10 ft. Two 45° elbows will be treated like one 90° elbow.

For the side exhaust installations, add one 90° elbow to the chart.
When calculating the total vent system length, you must add all the straight portions and elbows of the system (including the transition duct).
Laundry Center length includes factory-installed elbow that does not impact vent length.

HTX24EASKWS
Hotpoint® 6.2 cu. ft. capacity aluminized alloy electric dryer

FEATURES AND BENEFITS
Auto Dry - For clothes that come out feeling and looking great, this setting monitors air temperature to set the optimal drying time
Up to 120 ft. venting capability - Provides flexible installation
Aluminized alloy drum - Improves energy efficiency and resists corrosion
3 heat selections - Offer a choice of drying temperatures for personalized fabric care
Delicate cycle - Helps protect delicate fabrics
Rotary electromechanical controls - Make it simple to set cycles
Upfront lint filter - Makes cleaning out lint easy
End-of-cycle signal - Alerts you when the load is done, so clothes can be removed before wrinkles set in
Reverse-a-door - Door opening can be reversed to meet laundry room needs
Model HTX24EASKWS – White with gray backsplash
